

Application illustration · Campus shared spaces

Campus Drinking Point

Plan a drinking and bottle-filling point beside campus routes, with room for a short stop between activities.

The setting

A drinking point can become a clear pause along routes between classrooms, courtyards and activity areas. This campus illustration explores how a fountain might sit beside everyday circulation, with room for people to stop while others continue past.

The related model is the DF-26-01 drinking and bottle-filling station, with an upper filling outlet and a lower drinking basin in one unit. Review placement, water and drainage connections, fixing and cleaning access against expected circulation, then confirm the arrangement using the actual site drawings.

Planning points

01 Allow stopping space beside campus routes.

02 Coordinate water, drainage and fixing positions.

03 Coordinate drinking, bottle filling and pedestrian access.
